

ANTIMICROBIAL HARDWARE SOLUTIONS

Bacteria resides on every surface we touch. By protecting high-touch surfaces with an antimicrobial coating, the number of bacteria that cause infections are reduced and environments where we heal, learn, work and eat are safer.

The antimicrobial coating is made using ionic silver and is specially formulated to inhibit the growth of bacteria by interrupting cell multiplication. Ionic silver coatings interact with the bonding sites on the microbe surface. The result is that the silver ions surround bacterial cells, blockading food and slowing the growth of bacteria, mold and mildew.

Harry's Locksmith has access to a wide range of products that feature a antimicrobial coating along with different styles, functions and finishes that fit your building use and design.
